

Felipe Gomez

felipe.gomez.vs@protonmail.com - London, UK

Personal Profile

Final-year BSc Computing student at Birkbeck, University of London (expected graduation June 2026) with strong academic performance and a solid foundation in software engineering, data structures, and artificial intelligence. Experienced in developing full-stack applications, database systems, and data-driven software solutions using Python, Java, SQL, and modern development tools.

Motivated by building scalable and reliable software systems, with particular interests in cloud-native architectures, machine learning applications, and data engineering, I aim to contribute to the development of innovative, high-impact software solutions while continuing to expand my expertise in AI-driven technologies and modern software engineering practices.

Education

Birkbeck, University of London, UK

BSc (Hons) Computing | Expected Graduation: June 2026. Top-performing student (average marks > 85%)

As part of my degree, I worked on the design and implemented multi-tier database solutions, developed dynamic web applications using HTML, CSS, JavaScript, and Java and applied object-oriented design and complexity analysis to optimize algorithmic performance.

IRDTA DeepLearn 2026 – 13th International School on Deep Learning, Orléans, France, 2026.

International research training school focused on recent advances in deep learning from the Institute for Research Development, Training and Advice.

Queen Mary University, London, UK

MSc Artificial Intelligence | Expected Graduation: September 2027.

Planned postgraduate study focused on practical machine learning and modern AI systems, with expected study areas including intelligent agents, computer vision, natural language processing, AI ethics.

Project Experiences

AI-Driven Financial News Sentiment & Stock Trend Analysis - *Final-Year Project | Birkbeck University*

Currently developing a FinTech NLP system that analyses financial news headlines using transformer-based models to predict short-term stock trends. The project involves building a real-time data pipeline integrating news APIs, applying Python libraries for sentiment analysis, and visualising results through a TypeScript-based interactive dashboard

Professional Experience

Outlier AI – Remote Coder (London, UK) | *Mar 2025, Present*

Evaluated and improved AI-generated code to train large language models, ensuring correctness and performance in Python and Java.

Field Audio Systems Engineer – Events Industry - Logistics (Various Clients, UK & Spain) *1999 to 2022*

Designed, installed, and maintained complex audio-visual and control systems for large-scale live events. Delivered high-reliability solutions under time-critical conditions, troubleshooting networked and digital audio infrastructures. This experience strengthened my technical precision, fault diagnosis, and systems optimization skills; directly transferable to distributed software systems and cloud operations.

Technical Skills

- Languages: Python, Java, Rust, SQL, HTML/CSS.
- Machine Learning & Data: PyTorch (learning/in progress), NumPy, Pandas, transformer-based NLP models, model evaluation metrics.
- Frameworks & Tools: Git/GitHub, Docker, MySQL/PostgreSQL.
- ML Systems & Optimisation: Hyperparameter optimisation (e.g., evolutionary/search-based methods), model performance evaluation, compute–performance trade-offs, basic understanding of quantization and efficient inference.
- Software Engineering: Object-Oriented Design, Data Structures & Algorithms, testing and debugging, version control (Git), CI/CD fundamentals
- Cloud & Tools: AWS, Azure Fundamentals, Linux/WSL.

Soft Skills

- Strong analytical thinking with the ability to decompose complex systems and optimisation problems
- Experimental mindset: comfortable designing, testing, and iterating on models and system configurations
- Ability to reason about trade-offs (performance, compute, scalability) in technical decision-making
- Self-directed learner with proven ability to quickly acquire new tools and concepts in AI/ML
- Effective collaborator with experience working across technical and operational environments
- Clear communicator, able to explain technical ideas and results in a structured and concise manner

Languages

English – Proficient | Spanish – Native | German / French – Elementary
